

DOG BOLT

door security

The LSH (UK) dog bolt is designed to give enhanced protection to doors fitted with non PAS compliant hinges, allowing door systems to achieve hinge side PAS 024 performance.

On closing the door the aluminium hook passes through the receiver into the routed chamber within the frame. In the event of an unauthorised force applied to the door sash, the dog bolt automatically engages into the frame reinforcing preventing entry.

LSH (UK)'s dog bolt is available in two solutions to suit most major PVCu door systems and has two receivers available dependent upon application.

Technical information

Corrosion resistance:	BS EN 1670: 2007 Grade 4 (240 hours)
Operation:	Profile specific, available on request

For the dog bolt to function correctly, the product should only be fitted onto reinforced frame profiles, ideally with box section reinforcing. We recommend the dog bolt be fitted in conjunction with a minimum of 2 hinges per door.

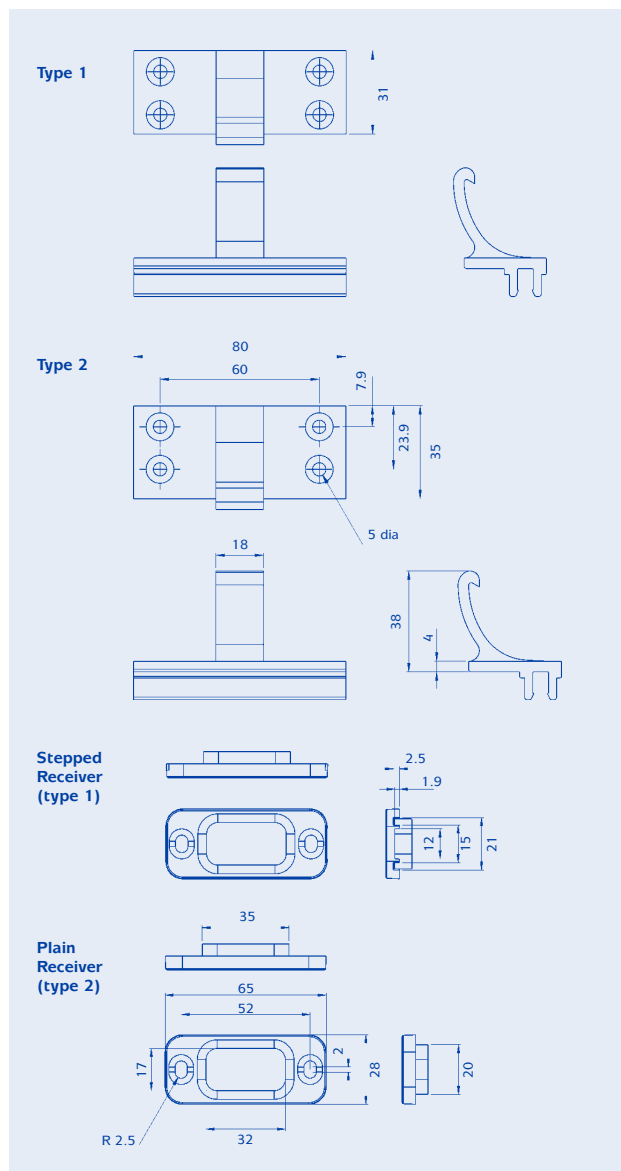

The receiver component is designed to cover the frame routing preparation only. Specific system routing details are available on request.

Material specification

Dog Bolt:	Aluminium, anodised silver finish
Receiver:	Black Nylon

Product Options

Available in 2 types, profile information available on request. See opposite for complete list of product codes.
