

LEVEL 4 SECURITY

tilt and turn gearing

The ultimate in window security.

A unique dual locking system using four anti-jemmy steel keeps locating into reinforcing.

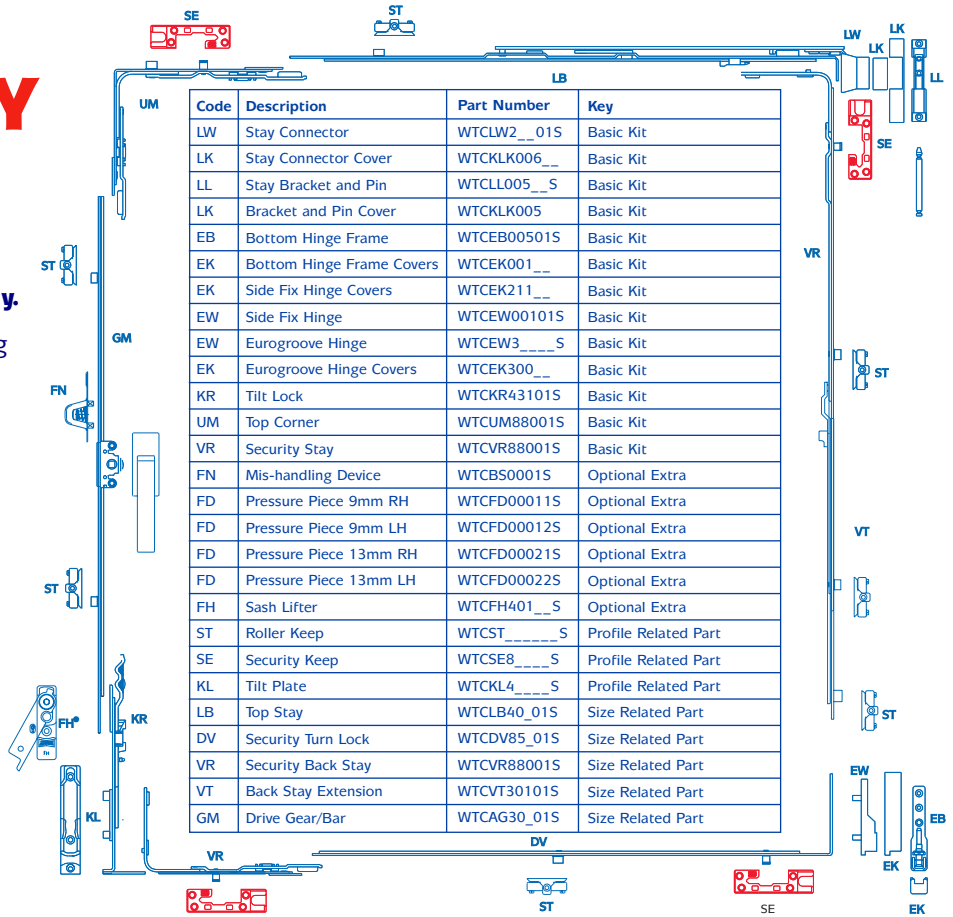

The system is designed with adjustable roller for compression and low friction whilst a specially designed mushroom provides security and anti-separation.

3D rollers are adjustable +.75mm -.75mm compression. The rollers may be popped out to increase cover by 2mm.

Groove claws are built into the moving components to hold them firm within the profile.

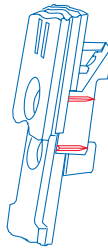

A sash lifter may be fitted to the tilt lock to overcome any drop in the sash as it closes into the frame.

A built-in Anti-slam device ensures that when the window is in tilt mode any changes in wind pressure do not cause the window to self close.

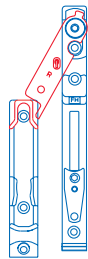

* Optional component, not supplied unless requested.
