

F VENT

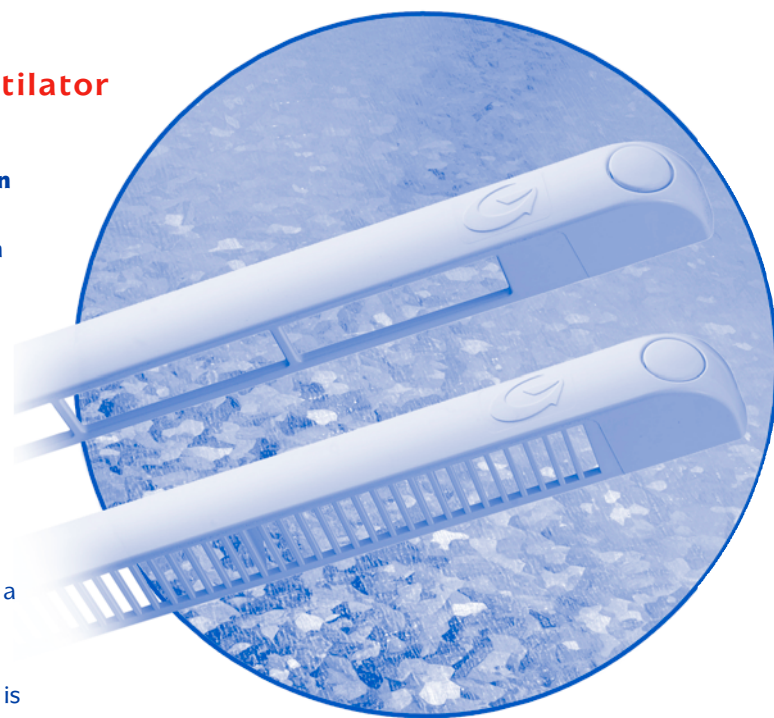

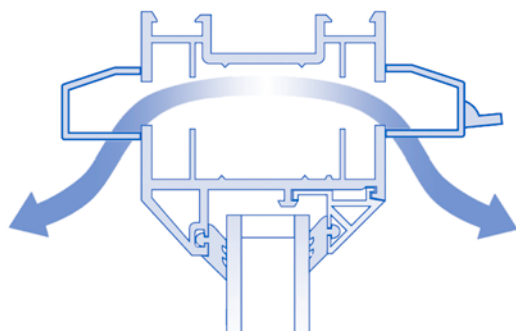

through frame 'clip fit' window ventilator

Greenwood's aesthetically pleasing F vent has been designed to have minimal visual impact when installed. Tested to accordance with current British & European standards (BS EN 13141-1 2004 Ventilation for Buildings) and Part F compliant, this new addition is the future for ventilation.

Available in 2500mm² and 1250mm² equivalent area models for Building Regulation compliance. Equivalent area now replaces free area for the measurement of trickle ventilators under Part F for both new build and refurbishment applications.

Vents are available as traditional screw fix installation or a new clip fit option, which effectively reduces installation time on-site and in production. The clip has been designed to fit securely to a range of profile depths and is provided already installed in the ventilator body.

Manufactured from PVCu, the F vent is available in a range of colours to suit variety of window profiles including PVCu, timber and wood effect finishes. 10 or 12 mm slot options offer flexibility for existing machine set up.
